

Task 33

Write the following SQL commands (do not use MySQL):

a)	Extract phone number and address by Muzik user.	SELECT phone, address FROM USER WHERE name = "Muzik"	
b)	Get all users whose name ends with A	SELECT * FROM USER WHERE name LIKE "%a"	
c)	Extract data about users who have an order amount of more than UAH 2,000.	SELECT name FROM USER WHERE id IN (SELECT product_id FROM "ORDER" WHERE sum > 2000);	If the tables are imaginary, then you can call them ORDER (with an upper case), if they are real - you need to put them in quotation marks, because the DBMS will confuse the names of the operators and give an error
d)	Count the number of orders in the table	SELECT COUNT(*) FROM "ORDER"	
e)	Calculate the total amount of orders made	SELECT SUM(sum) FROM "ORDER"
